How To Embed A Virtual Tour Using WPBakery Element

WP VR Plugin Integrations · https://rextheme.com/docs/how-to-embed-a-virtual-tour-using-wpbakery-element/

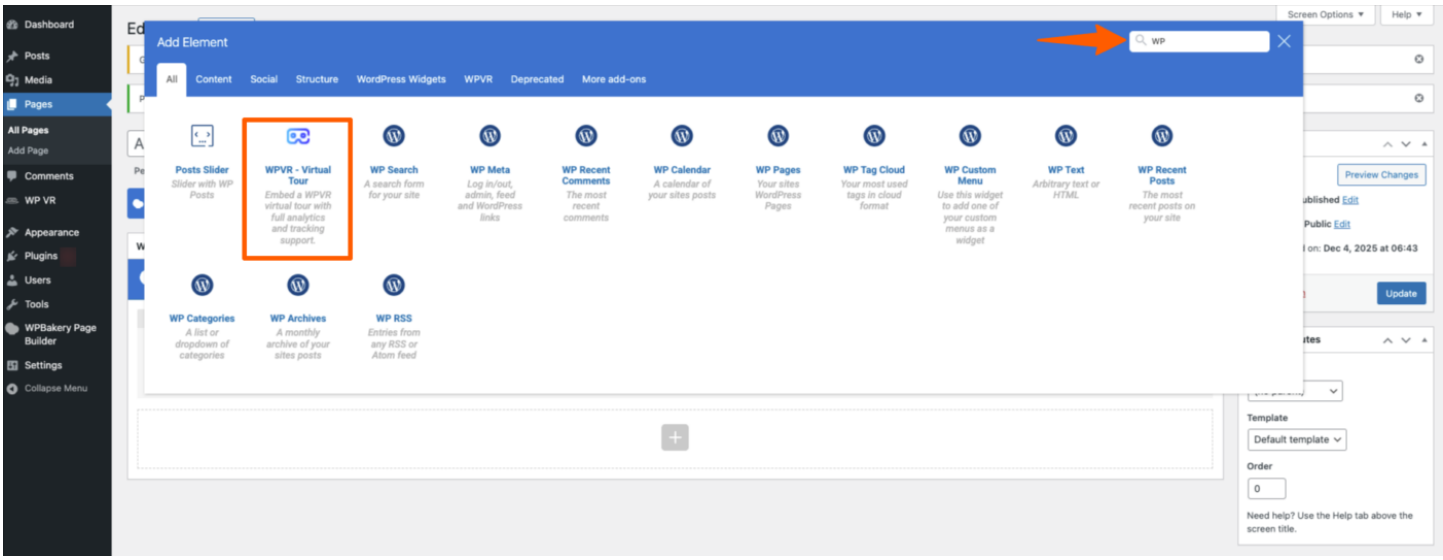
If you're using the WPBakery Page builder, **WP VR** has a dedicated WPBakery Element that you can use to embed virtual tours on your site easily.

Once you create a virtual tour, follow the steps below to embed a virtual tour using WPVR and WPBakery Element.

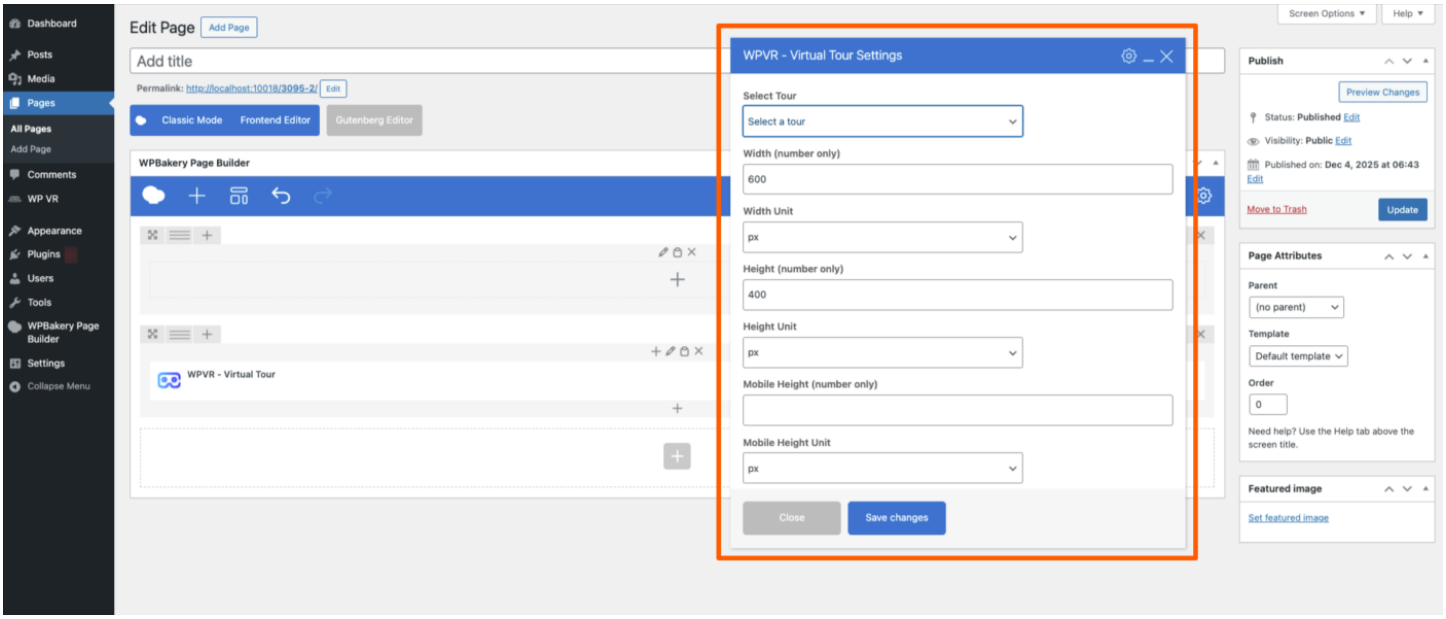
1. After creating the tour, remember the **Tour ID** or **Tour Name**.

2. Edit the page/post using **WPBakery Page Builder**, where you want to embed this virtual tour.

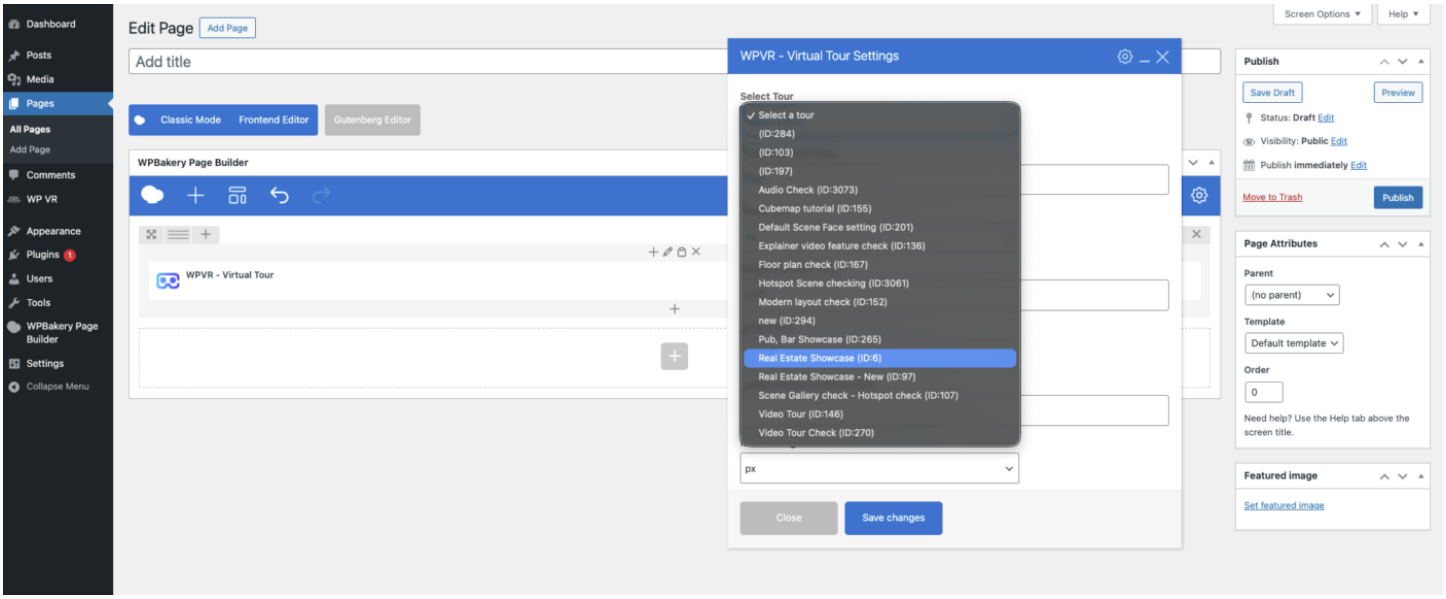
3. On the Element area of **WPBakery**, search for the **WPVR** widget.



4. Click on the **WPVR** - Virtual Tour Element, and it will add the element.



5. Now, you will be required to select the Tour from the drop-down. Then you'll need to input the **“Width”**, **“Height”**, and **"Radius"**.



- **Width -**

  - Assign a positive numeric pixel value. For example: 600px.

  - Or, you can use a percentage that will take the percentage width of the container of the page. Example: 90%.

  - If you wish the tour to be full-width of the whole page, then input the text “100vw”.

- **Height -**

  - Only assign a positive numeric pixel value. For example - 400px

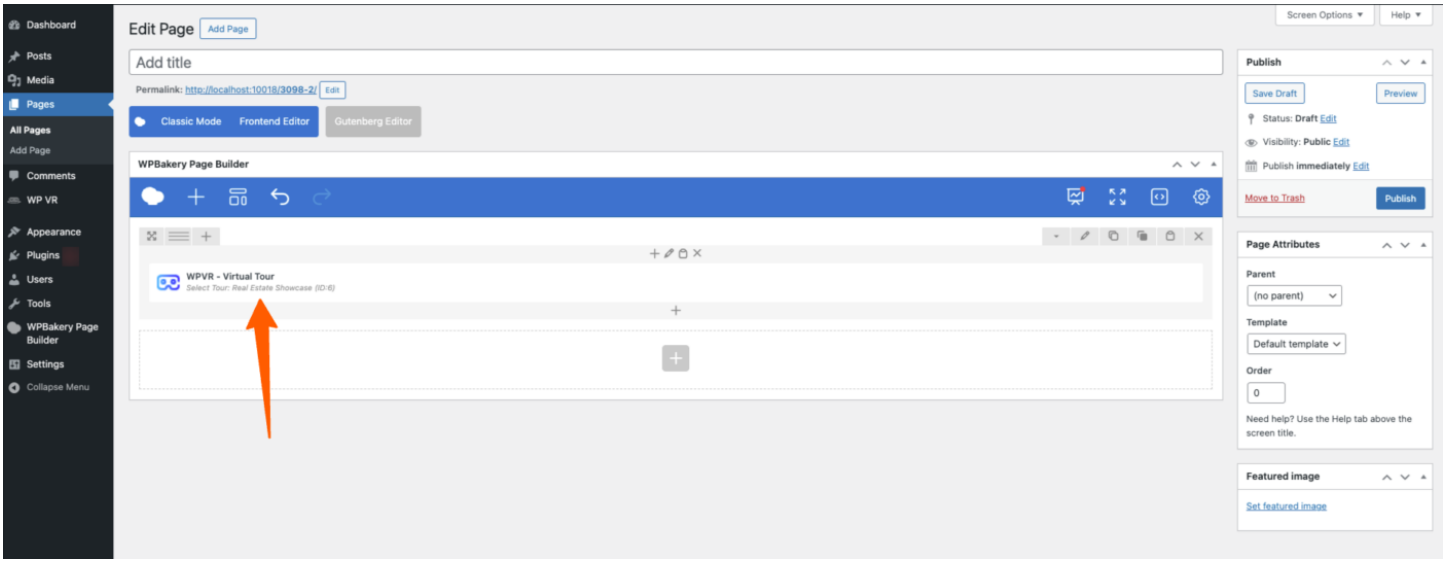
- Do not use percentage or any text

- **Radius -**

  - Assign a positive numeric pixel value. For example - 10px

  - Or you can use a percentage. For example - 10%

6. Once you provide the required data, you will get a preview of the tour on your web page like this:



7. Now, you can preview or publish the page, and you will see that a virtual tour has been embedded on your site.

That's how easy it is to publish the **WPVR** tours on your webpages using **WPBakery**.
