How To Set Users Rules For Catalog Mode

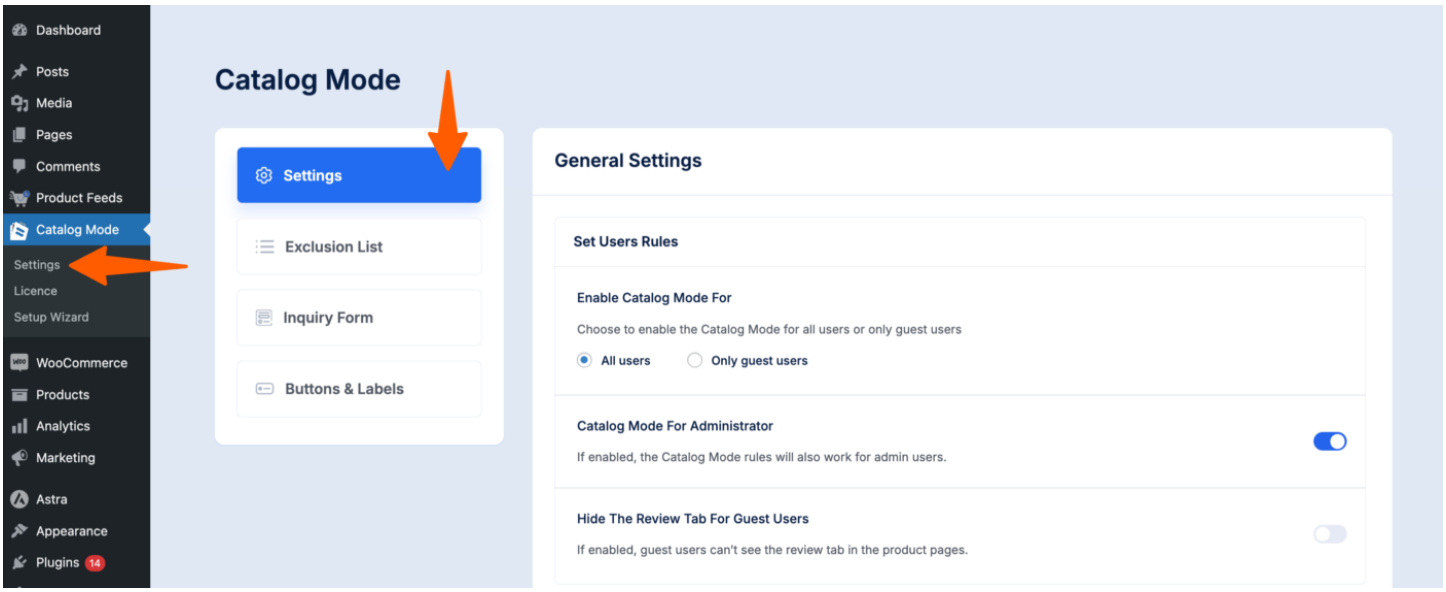
Settings · https://rextheme.com/docs/how-to-set-users-rules-for-catalog-mode/

The **Catalog Mode for WooCommerce plugin** gives you full control over how your online store is displayed to different users. With this powerful feature, you can easily decide **who can see product prices, who can make purchases, and which users experience your store in catalog mode**.

This functionality is ideal for businesses that want to **turn their WooCommerce store into a product catalog**, limit purchasing to specific users, or create a wholesale or B2B store experience. You can restrict access to pricing and purchasing for guest users, while giving full access to logged-in customers or administrators.

Enable Catalog Mode

1. Go to **Catalog Mode** > **Settings**. Here you'll find different options to set users rules.



2. Now you can choose to enable catalog mode for either '**All Users**' or for '**Only Guest Users**'.

Catalog Mode For Administrator

If you want to show the Catalog Mode for your products for the Administrators roles user also. You can easily do so by enabling the option 'Catalog Mode For Administrator'.

And this option will make sure that the Administrator role users also see the Catalog mode for the products.

Hide The Review Tab For Guest Users

If you want to limit product reviews to registered customers, **Catalog Mode for WooCommerce** allows you to hide the review tab for guest users.

Enabling this feature will ensure that only logged-in users can see the reviews.

That's how easy it is to set the rules.
