How To Set Custom Time Intervals For Auto-Feed Update

Useful Control Options · https://rextheme.com/docs/how-to-set-custom-time-intervals-for-auto-feed-update/

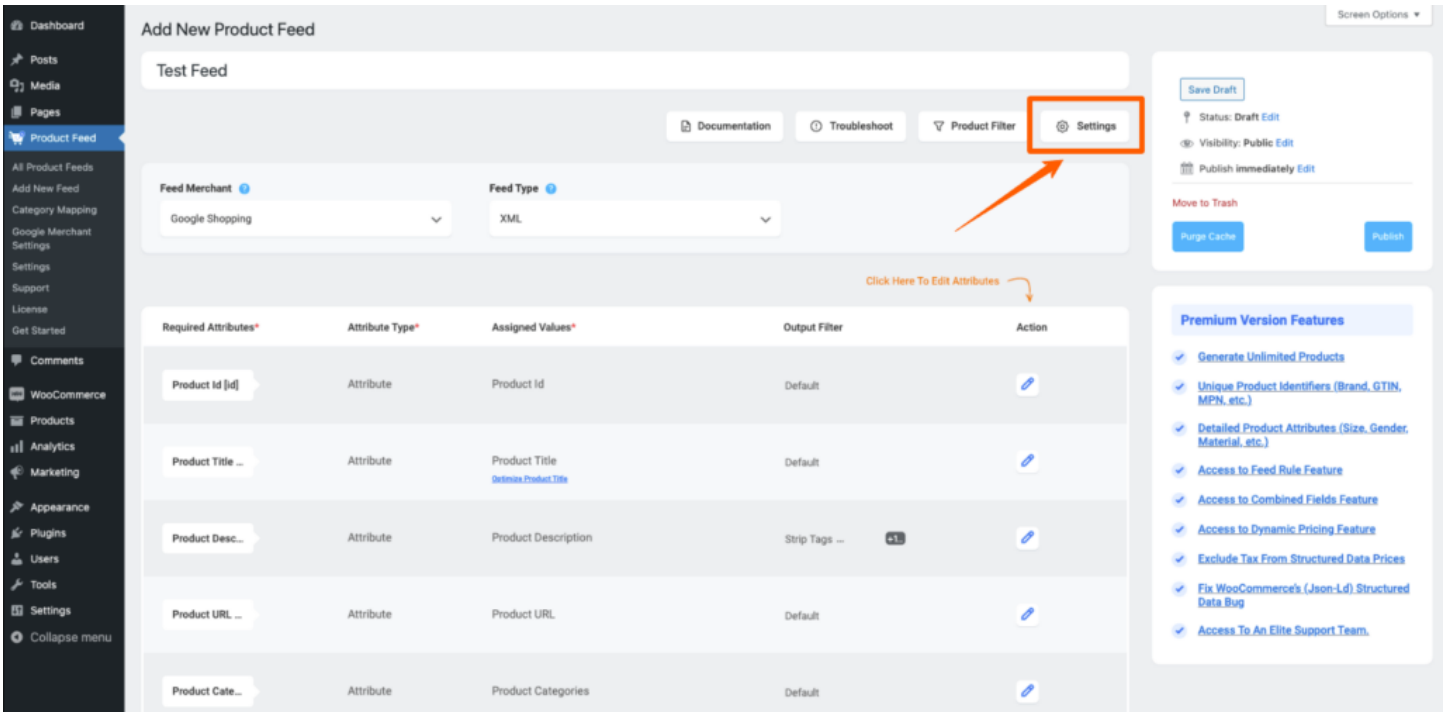
When you generate product feeds, you might want to schedule auto-feed updates at a specific time.

Let’s say, you’ve generated a feed using Product Feed Manager. Now you’ve set a feed update schedule at 4.00 PM. That means, every day at this time your feed will be regenerated and if changes were made to your products it will be updated.

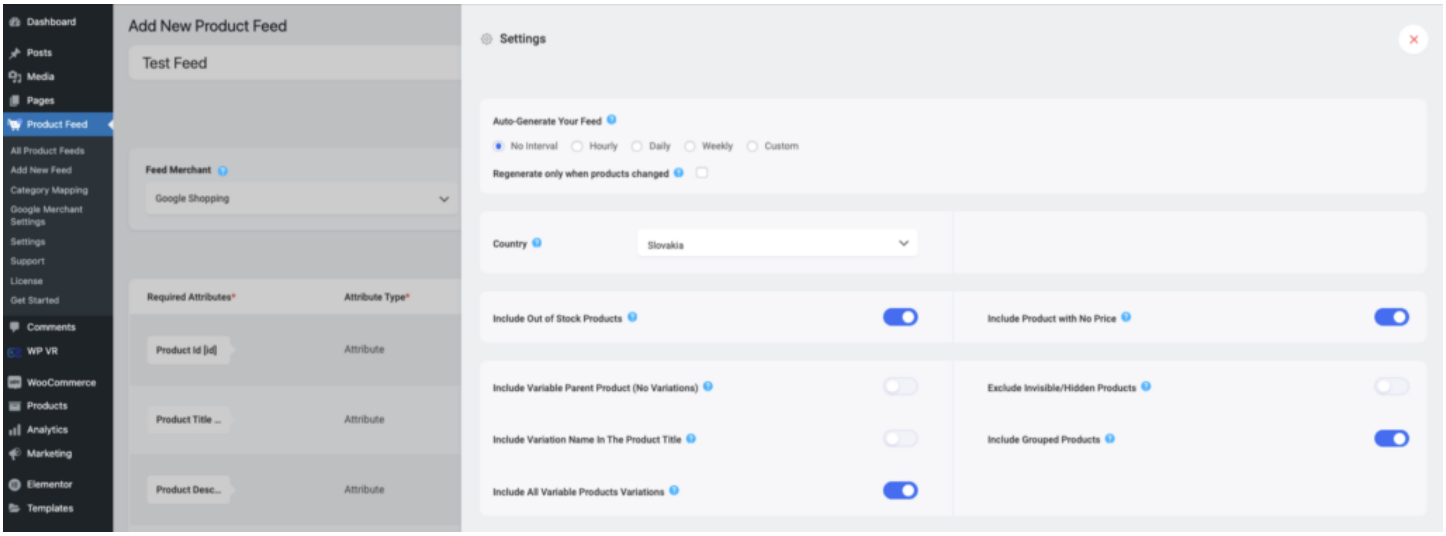
It’s pretty easy to set custom time intervals for your feeds.

Follow the steps below.

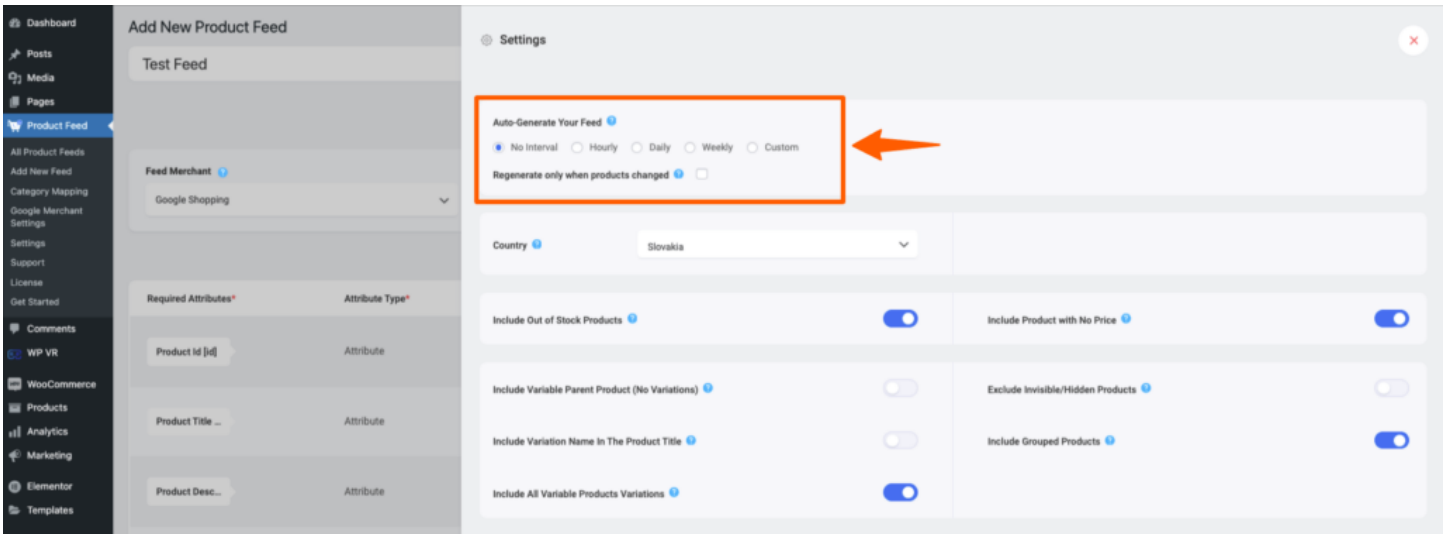
1. Click on the **Settings** button.



Once you click on the Product Settings button, the Product Settings drawer will slide in from the right side of the window.

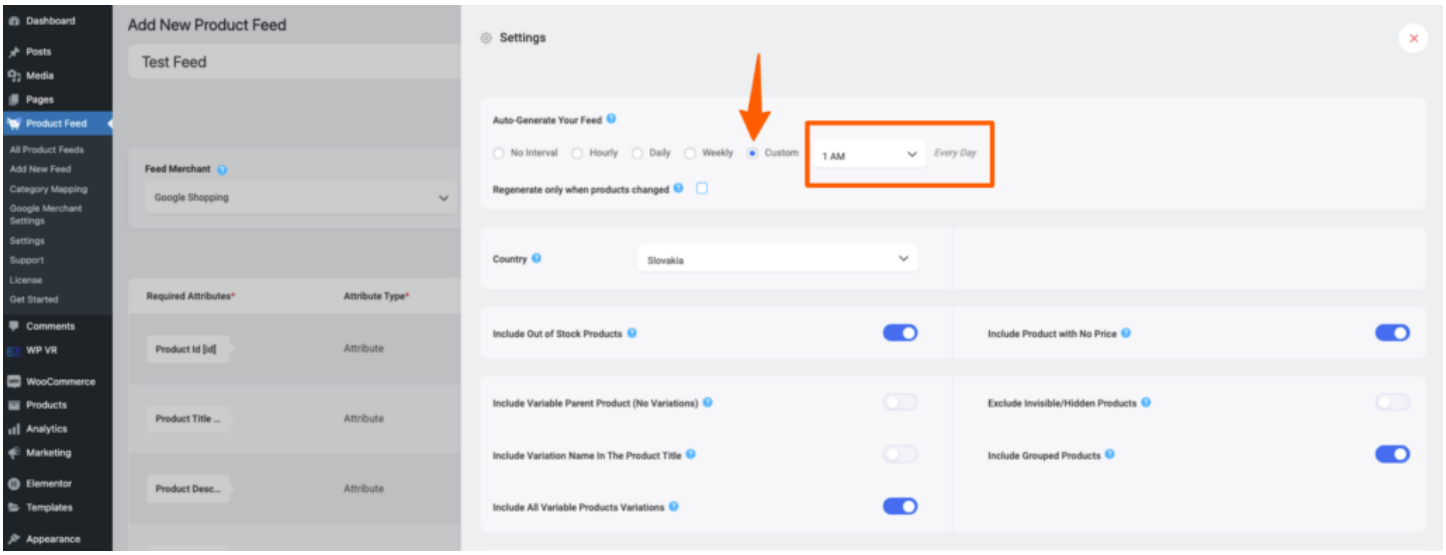


2. In the first option, you'll see **Auto-Generate Your Feed**.



3. Now, to set a specific feed update interval time, select **Custom.**

As you select **Custom,** you'll see a drop-down from where you'll choose the preferable time.



That’s it! From now on, any changes you make to the product data in your store, the feed will be auto-updated with those data at your assigned time.
