How To Include Private Products In Product Feed

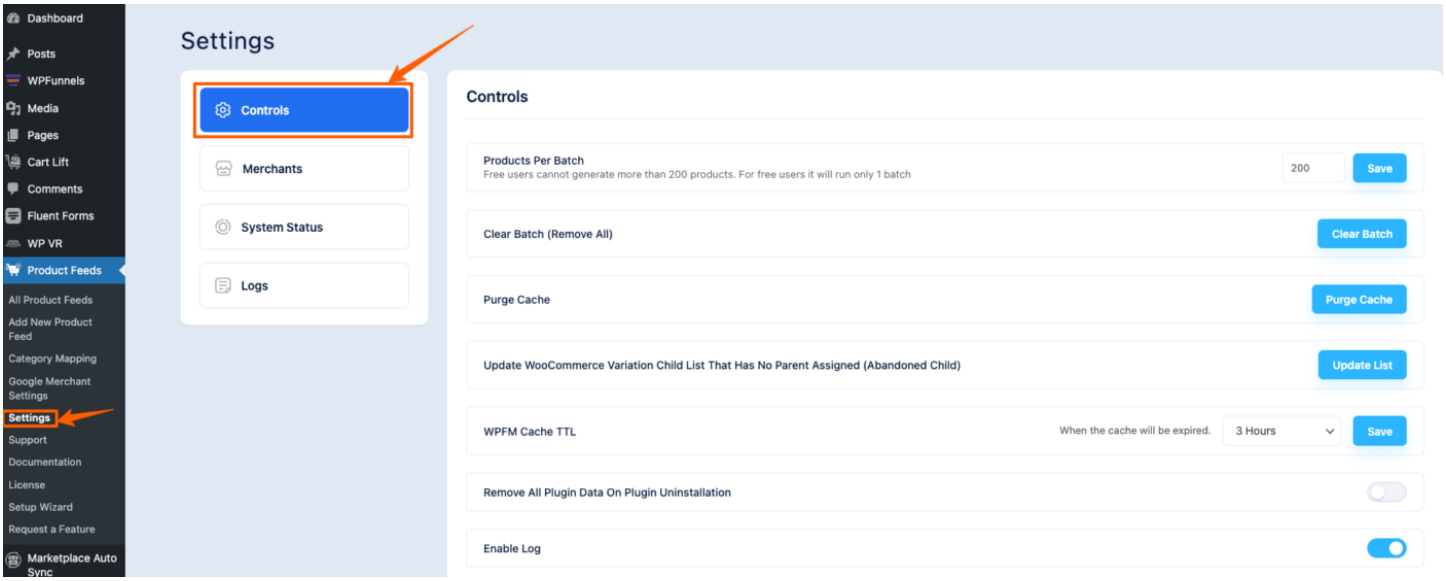
Feed Filters: Help Customize Feed · https://rextheme.com/docs/wpfm-include-private-products-in-product-feed/

You might have some products in your WooCommerce store that are marked as **Private**.

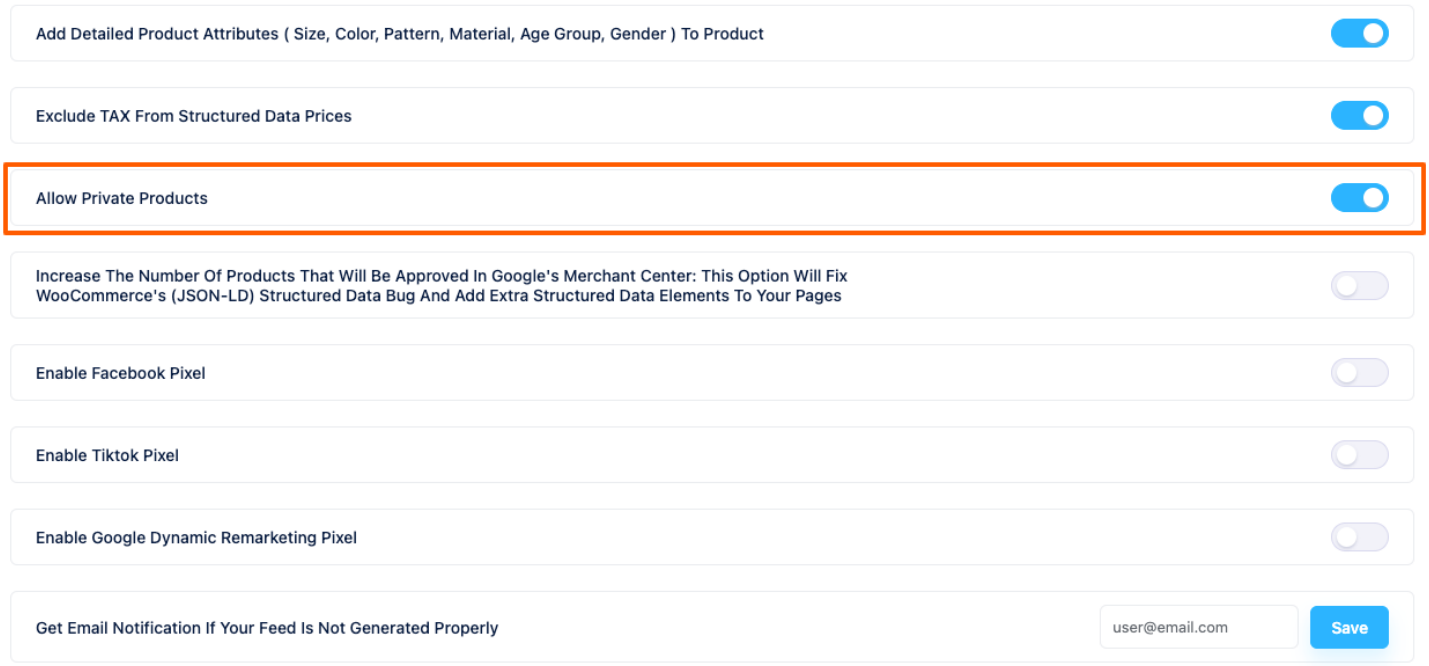
Then you can include them on your product feed using the **'Allow Private Products'** feature in PFM.

Follow the steps below to do so.

1. Go to **Dashboard >> Product feed >> Settings >> Controls**



2. Scroll down a little and look for the option '**Allow Private Products**' and enable it.



That's it. Now, when you generate a product feed, it will also include products that are marked as Private.
