How UGCify Looks on Your Product Page

Getting Started · https://rextheme.com/docs/how-ugcify-looks-on-your-product-page/

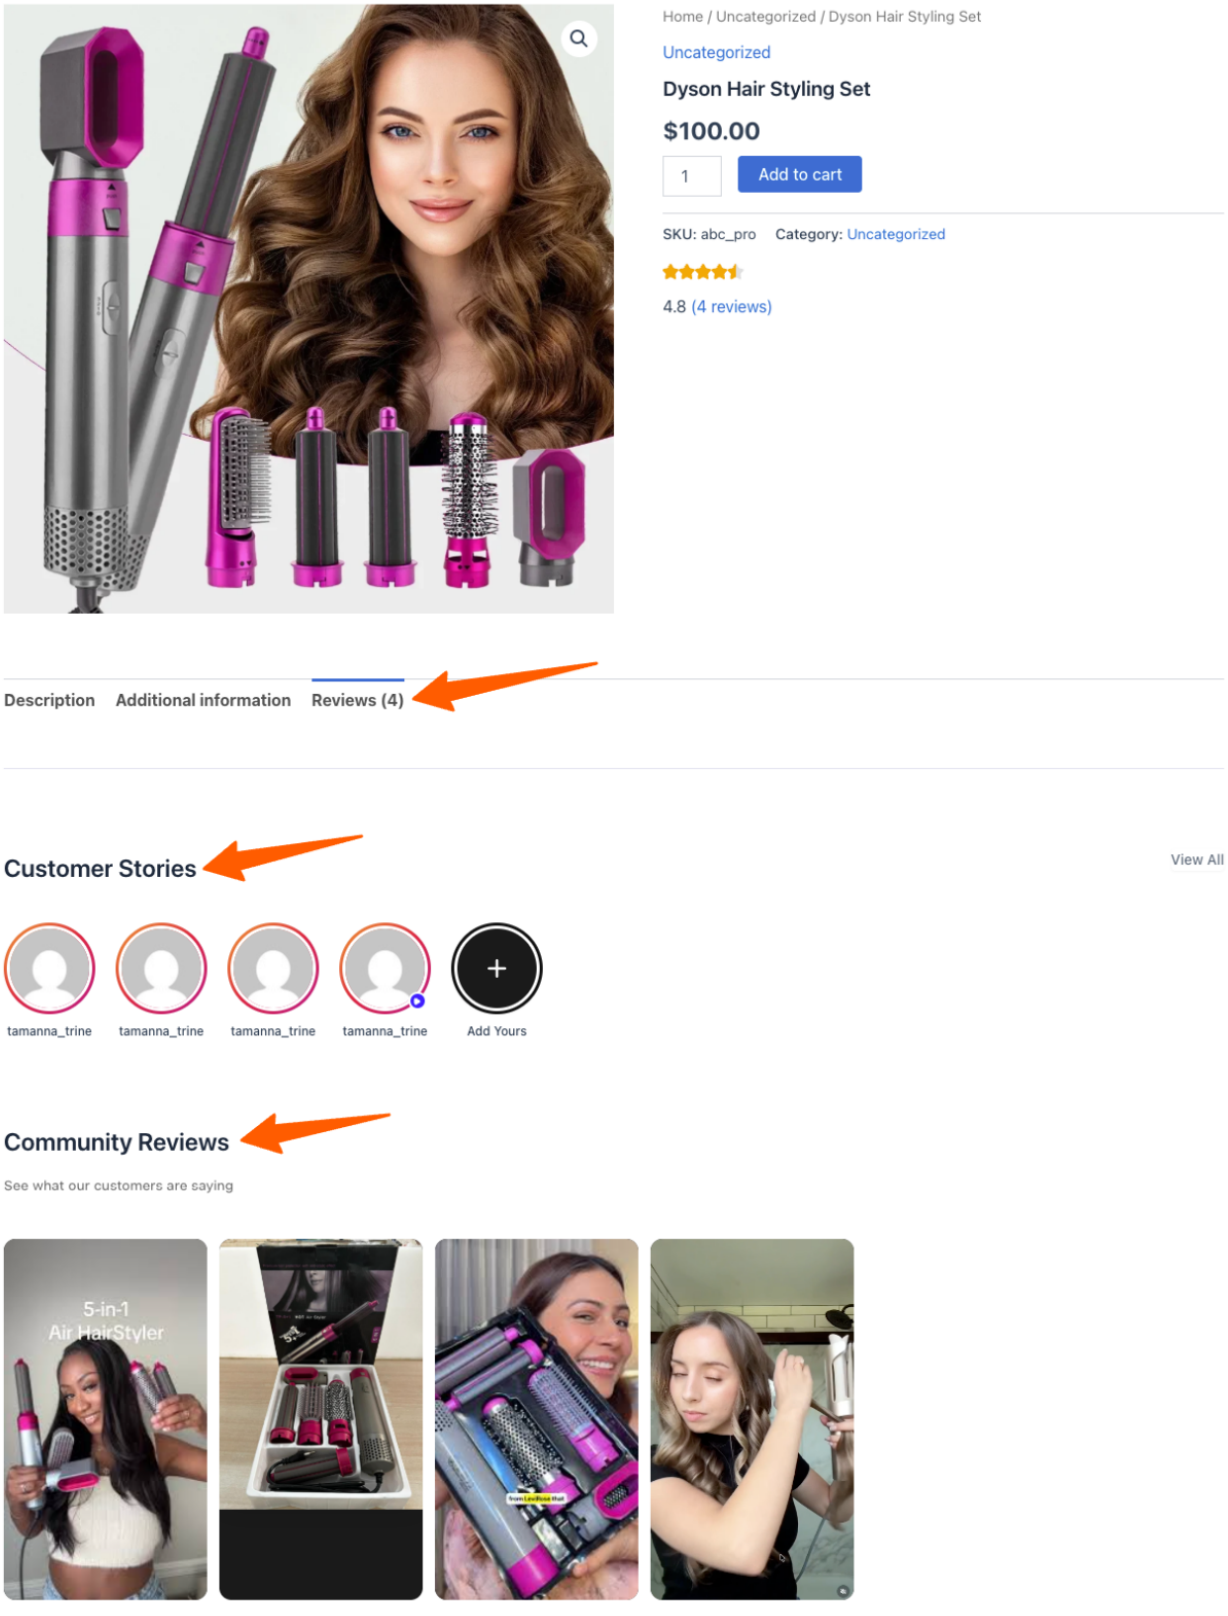

A visual guide to how customer photos, videos, and stories appear to shoppers on your WooCommerce product pages and how you control every aspect of the display.

Placement - Where the UGC Section Appears

UGCify injects its gallery directly into the **Reviews tab** on your product page. Shoppers switch to the Reviews tab and immediately see two distinct areas: the **Customer Stories** row at the top, followed by the **Community Reviews** grid below it.

The screenshot below shows the **Reels Type Template**.

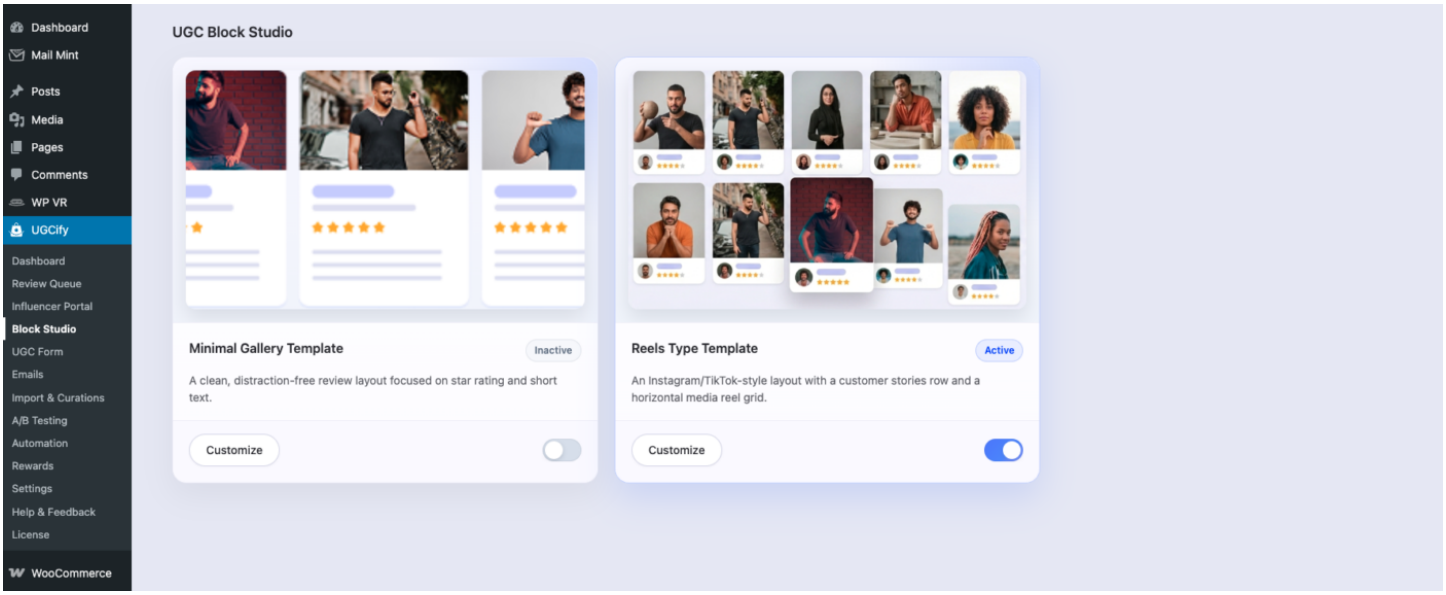

The UGCify section as it appears live on a WooCommerce product page — Customer Stories row + Community Reviews grid

> 💡 **Tip:** You can also place the gallery anywhere on your site using the shortcode `[ugcify_reviews]` or `[ugcify_reviews product_id=""]` — for example, on a standalone page, a landing page, or inside a Gutenberg block.

Block Studio - Choosing Your Gallery Template

UGCify ships with two gallery templates. You activate one at a time from **UGCify → Block Studio**. The active template is what shoppers see on your product page.

Block Studio — choose between Minimal Gallery Template and Reels Type Template

Minimal Gallery Template INACTIVE

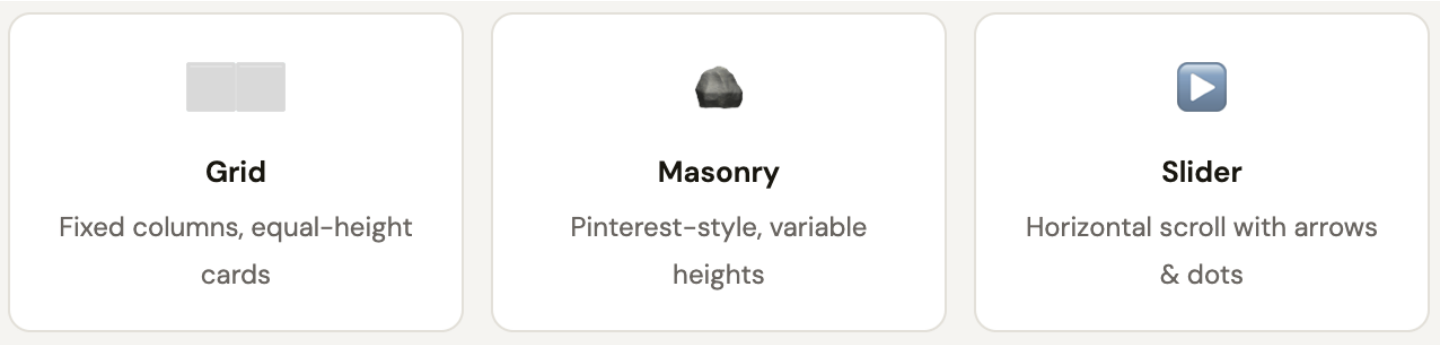

A clean, distraction-free card layout focused on star ratings and short review text. Ideal for stores where the written review matters more than the visual media. Three review cards sit side by side in a masonry or grid arrangement.

Reels Type Template ACTIVE

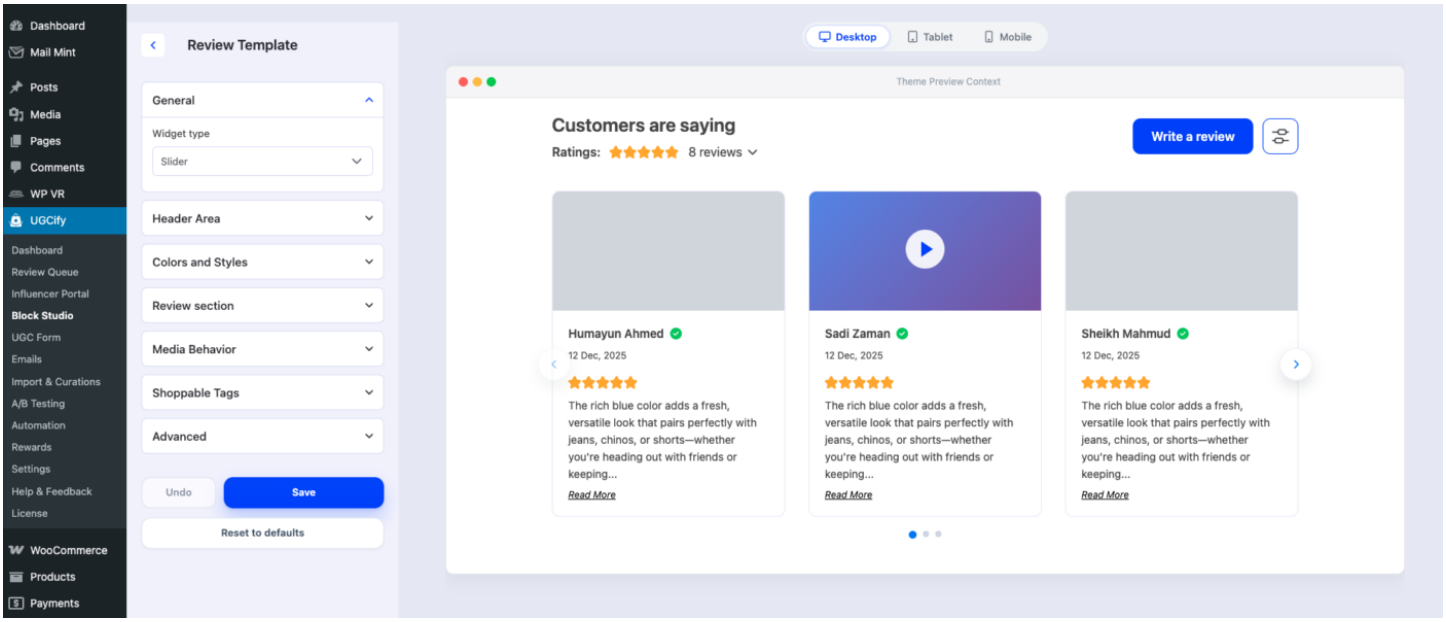

An Instagram/TikTok-style layout with a Customer Stories row at the top and a horizontal media reel grid below. Best for visual products — fashion, beauty, lifestyle — where real customer photos and videos are the main selling point.

Template 1 - Minimal Gallery Template

Inside the template customizer, the **General → Widget type** dropdown lets you change how reviews are laid out within the gallery area.

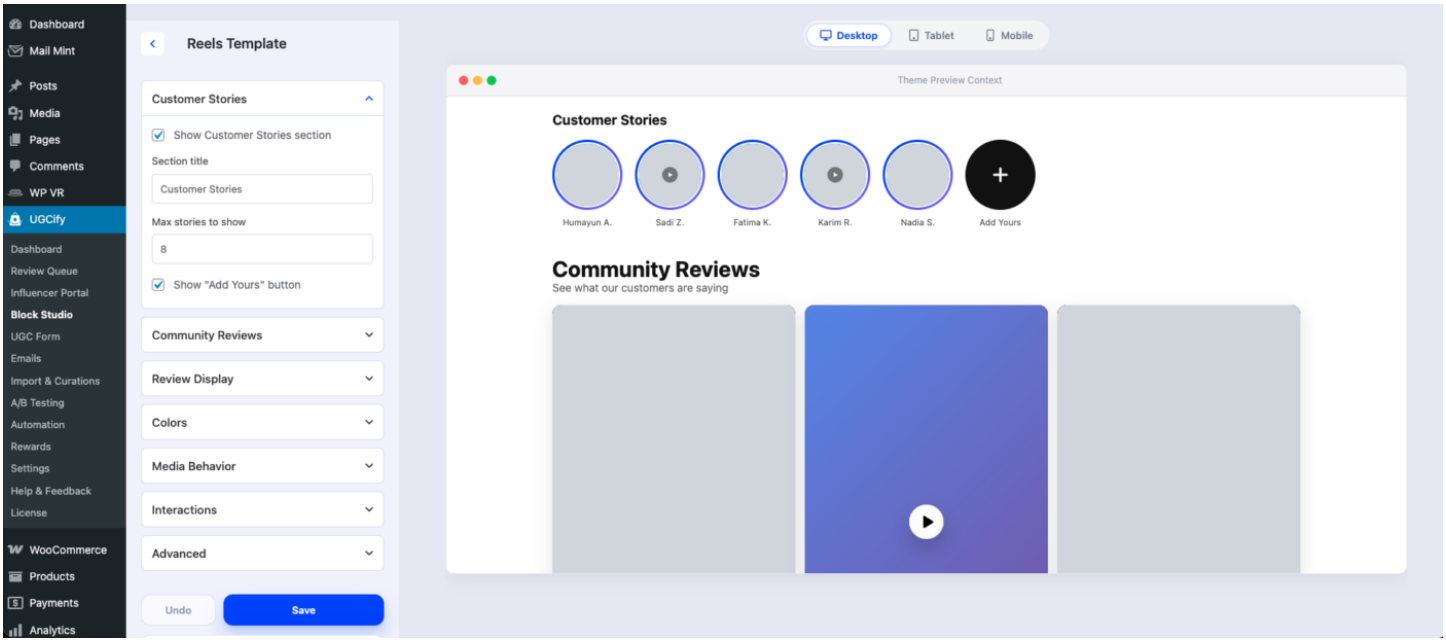

Inside the Minimal Gallery Template Customizer, there are a lot more options to customize the layout to your liking. Here is a screenshot below to see a snippet:

Template 2 - Reels Type Template

Clicking **Customize** on the Reels Type Template opens a side-by-side editor with a live preview. Changes appear in the preview instantly — no need to go to the product page to see how it will look.

Here is a screenshot below to see a snippet of What you can configure:

The preview panel switches between **Desktop**, **Tablet**, and **Mobile** viewports so you can check the layout on every screen size before saving.

How It Looks on Mobile

The gallery is fully responsive. On mobile, the Reels template stacks into a single-column layout, the Customer Stories row scrolls horizontally, and the media reel becomes a tall vertical scroll.

You can preview the mobile layout at any time inside the Block Studio customizer by clicking the **Mobile** button in the top-right of the preview panel.

> 📱 **Mobile preview:** Switch between Desktop, Tablet, and Mobile inside the Block Studio live editor to check every breakpoint before saving. No publishing required — the preview updates instantly.

That's it.

Every shopper who lands on your product page is quietly asking one question: "*Has anyone else actually bought this and loved it?*" UGCify answers that question visually, automatically, and without you lifting a finger after setup.
