How To Set Individual Hotspot Icon Color and Animation In Panorama Images

Advanced Settings for Virtual Tours · https://rextheme.com/docs/individual-hotspot-icon-color-animation-panorama/

You can now set individual hotspot icon colors and animations in your 360 panorama images using WPVR.

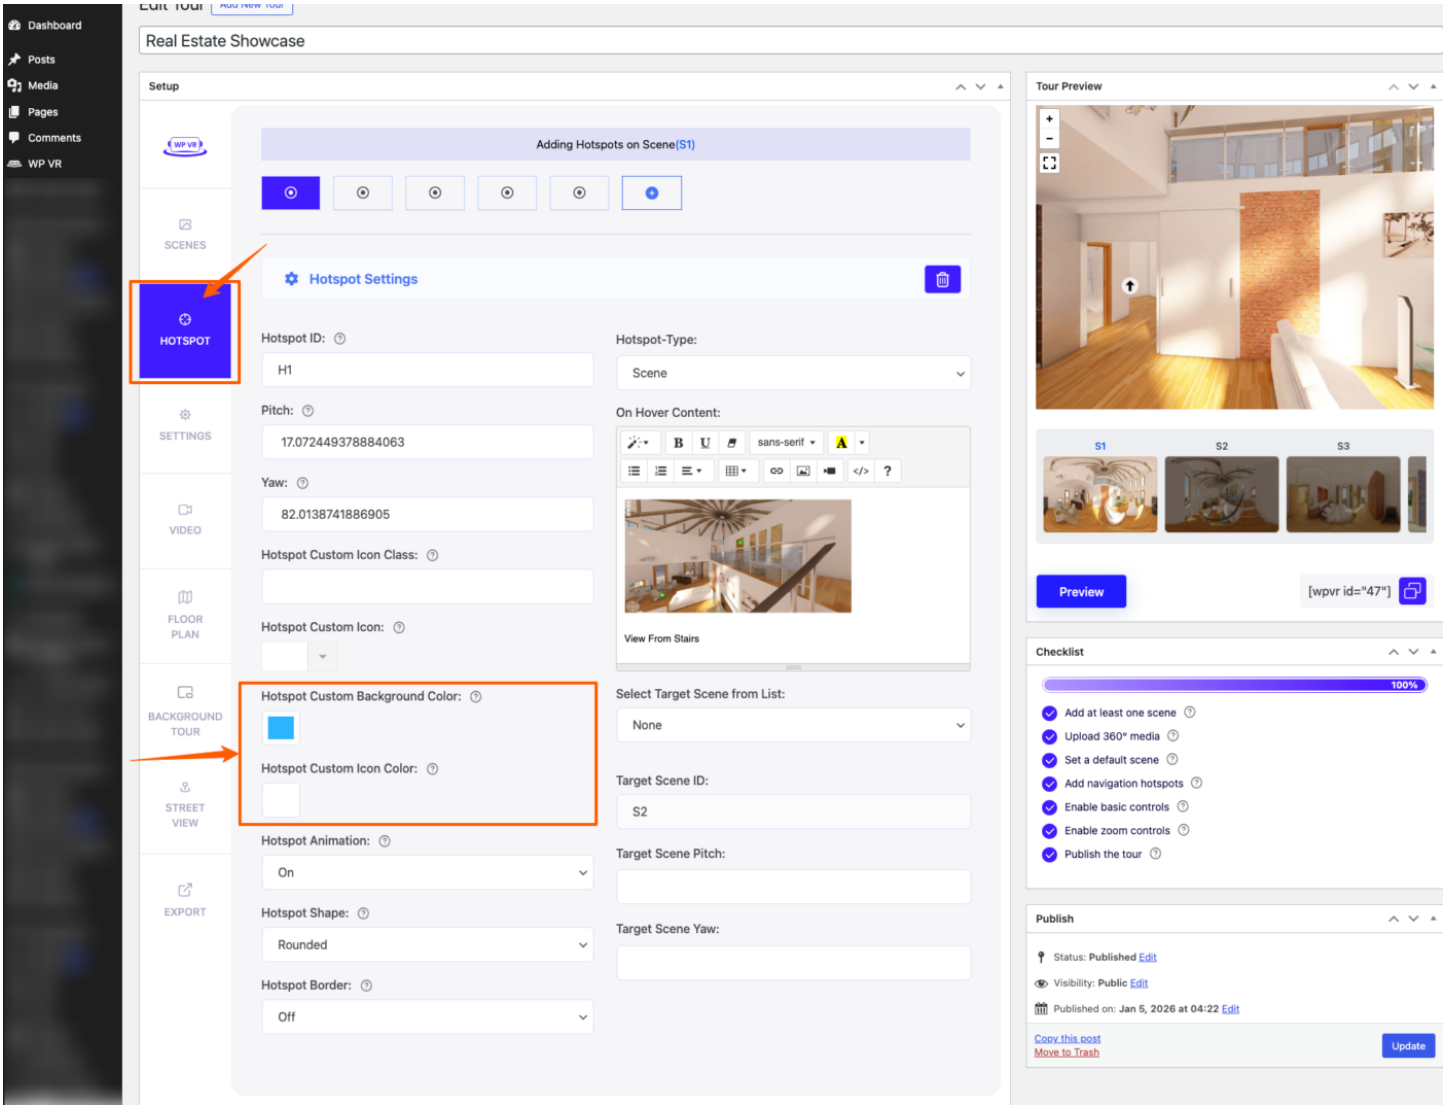

It’s really easy and simple to do.

Here’s how you can do that:

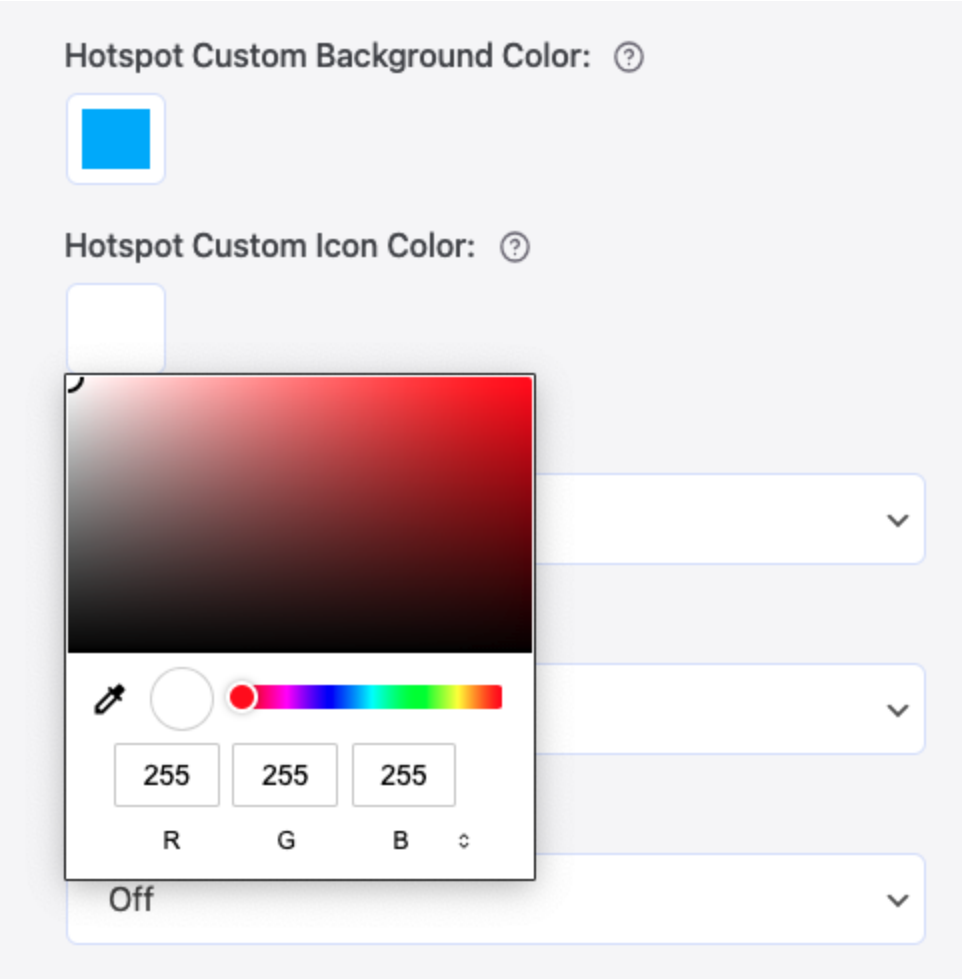

Set Individual Hotspot Icon Color and Animation

i. Go to **Wordpress Dashboard > Tour** and Select your Tour.

Go to the Editing mode of one of the hotspots and select the **Hotspot Custom Background Color and Hotspot Custom Icon Color** option.

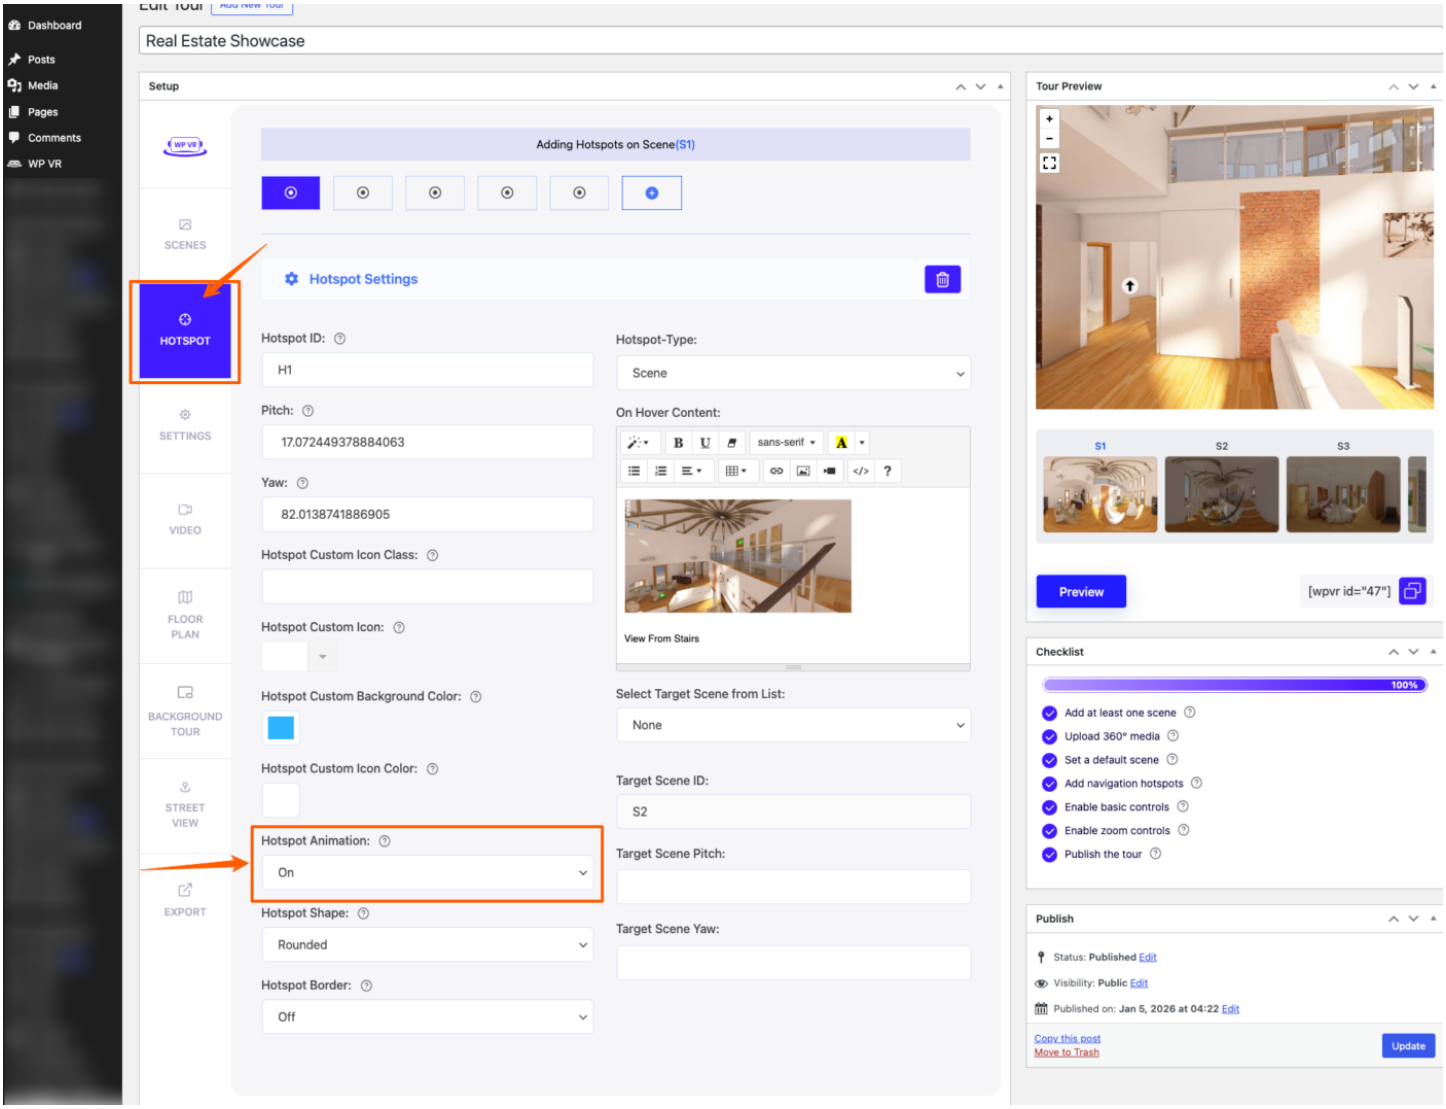

ii. Once you've added a hotspot and customized its color. Move on to the next Hotspot in the same Scene and use another color for that.

iii. You can also turn the **Hotspot Animation** On or Off to enable the animation for the hotspot to make it more eye-catching.

And it's individual to each hotspot.

Note:

Remember, you have to update and **Publish** the tour on the website page to check the color of the hotspots.

Customized Hotspot Icon or Color isn't visible in the **Preview Mode** of the backend.

iv. So, publish the virtual tour and embed it in a post or website. You can then view a preview of the page or post to see how it appears on the front end.

That’s all. You can now change the colors for multiple hotspots in one Scene.
