How to Set Up Password Protection For Your 360 Virtual Tour – WP VR

Publish Virtual Tours on Your Website · https://rextheme.com/docs/password-protection-for-360-virtual-tour/

You can easily change the visibility of your virtual tours from **Public** to **Password Protected**.

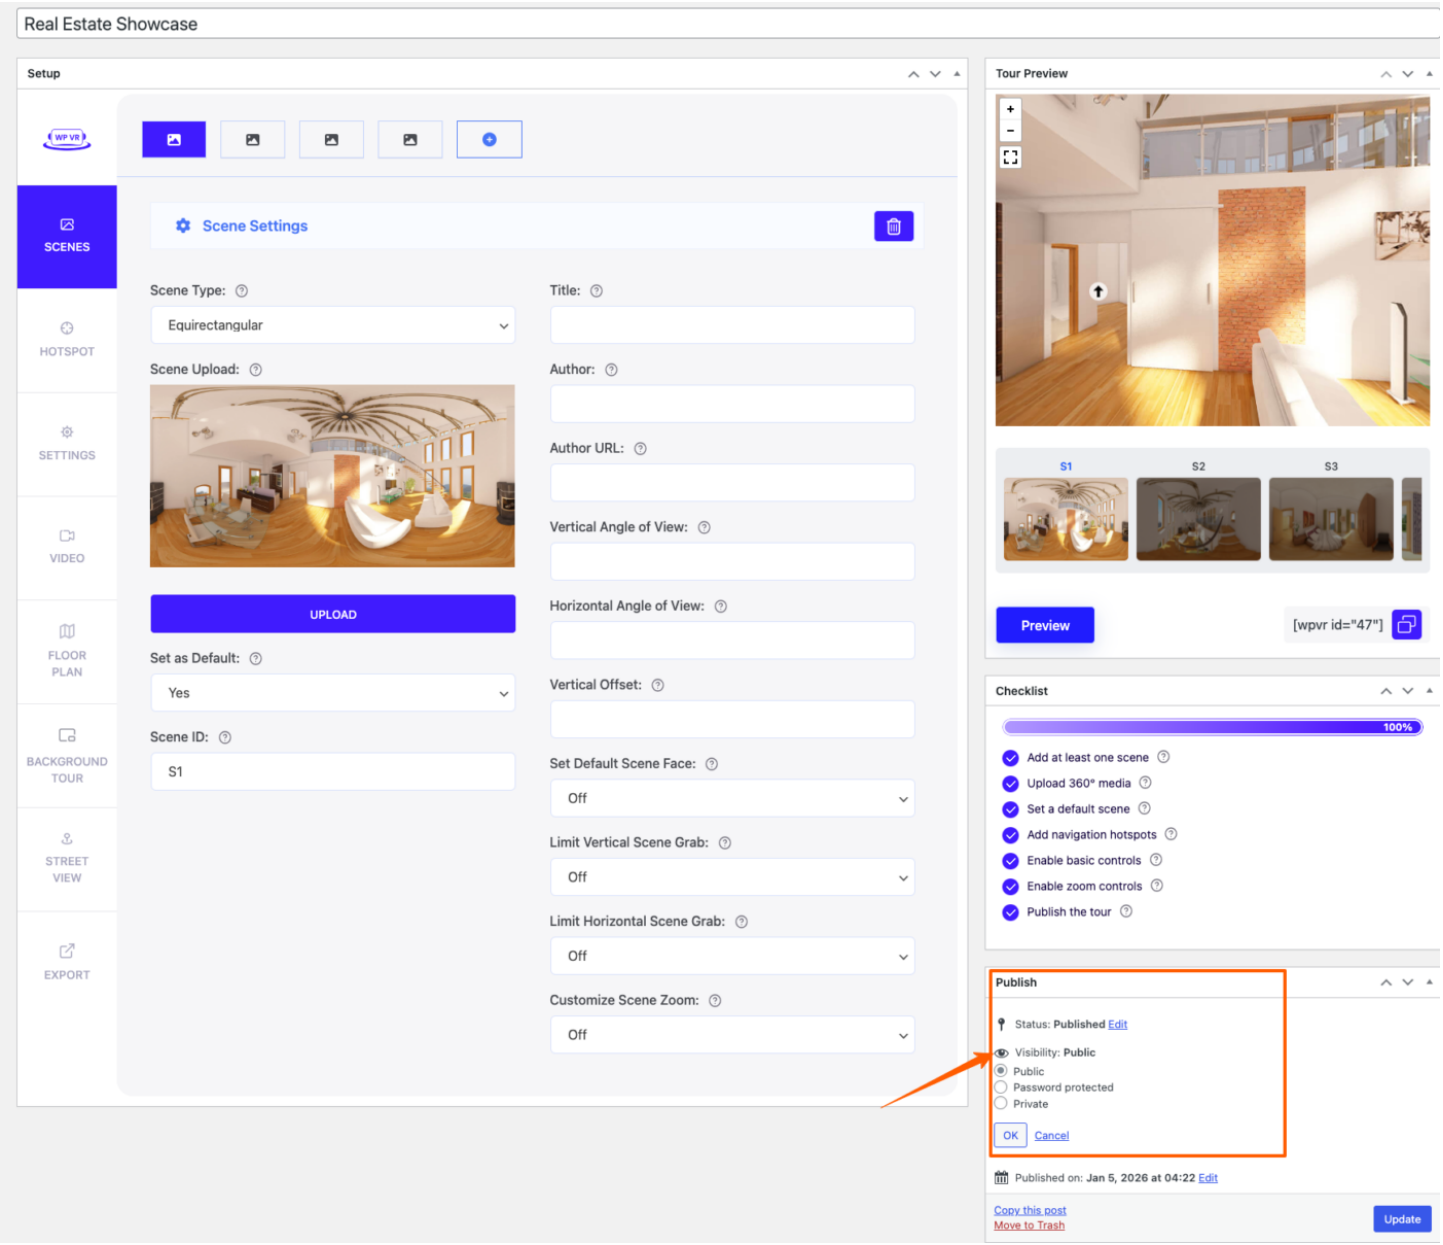

Selecting the option Password Protected to the tours with WPVR, you have to enter a password to be able to see it.

Let’s have a look at how you can enable the option Password Protected for your virtual tours.

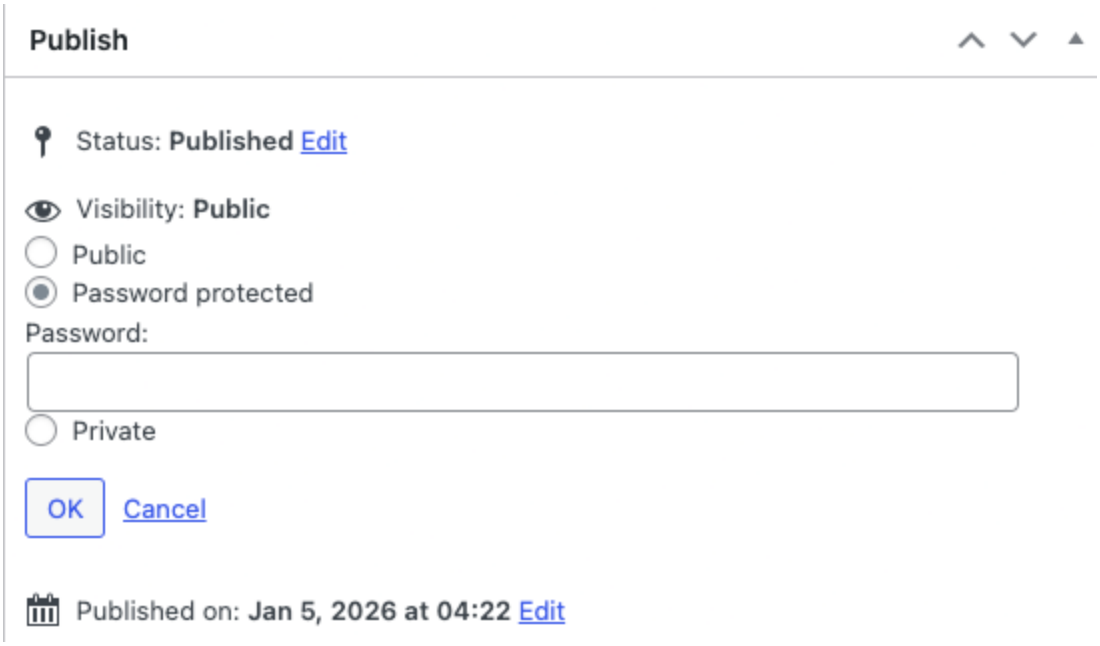

Enable Password Protection For Your Virtual Tour

Follow the steps below.

1. While editing or creating a tour, go to the **Scenes** Tab

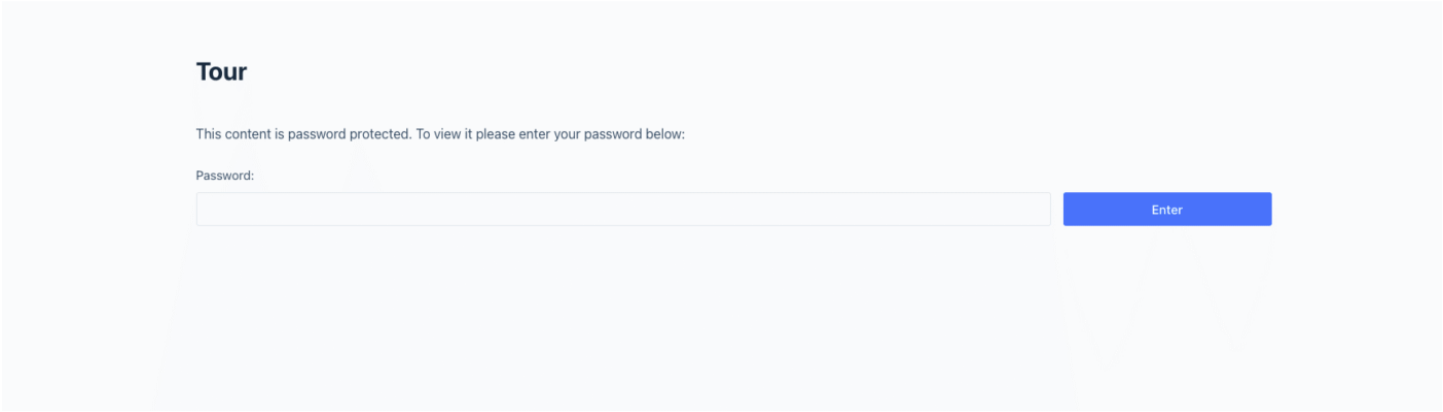

2. On the right side at the bottom, you will get the option called Visibility. Select **Password Protected**, and after that, you'll be able to see a input field below.

3. Enter your **Password** and Publish/Update your tour.

After publishing the tour on your website it will appear like this.

As you can see, it’s really easy and simple.
