How to Add Price Based Shipping Conditions in Advanced Shipping

Shipping Conditions · https://rextheme.com/docs/price-based-shipping-conditions/

In this guide, I'll explain how to set up price-based shipping conditions based on your customers' cart value using our Advance Shipping For WooCommerce.

Suppose you want to set shipping charges for a specific region: orders from $1 to $100 will get a certain shipping fee, while orders from $101 to $250 will have a lower shipping fee for the same location.

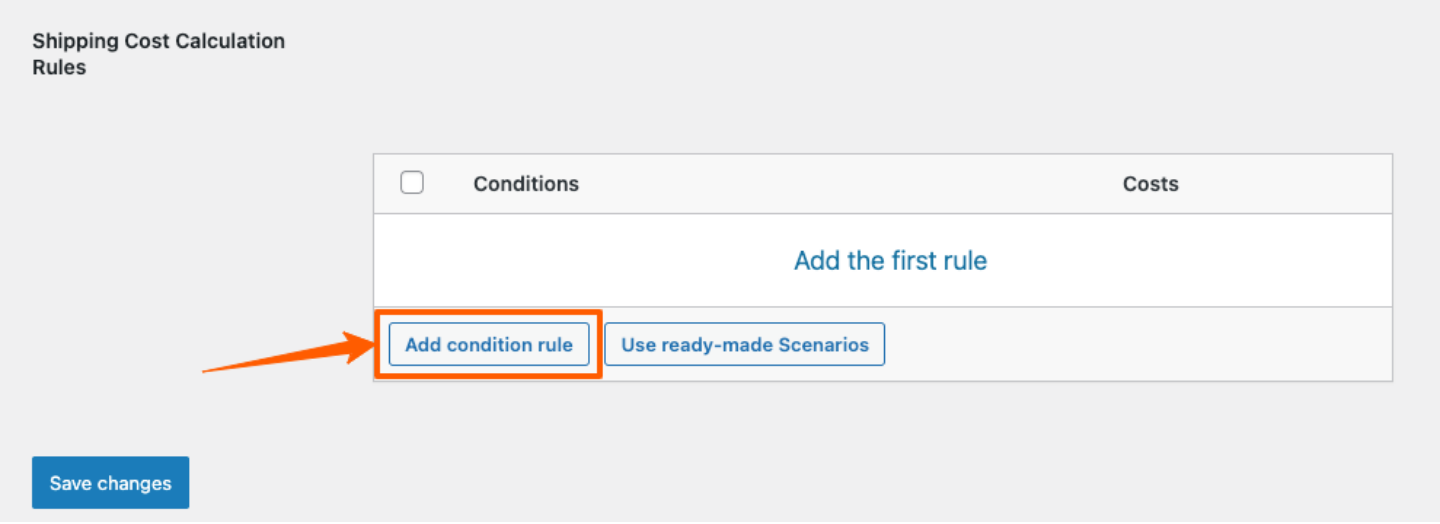

So let's get started.

Single Price Based Shipping Condition:

1. First of all, Go to **Advanced Shipping Method** Settings

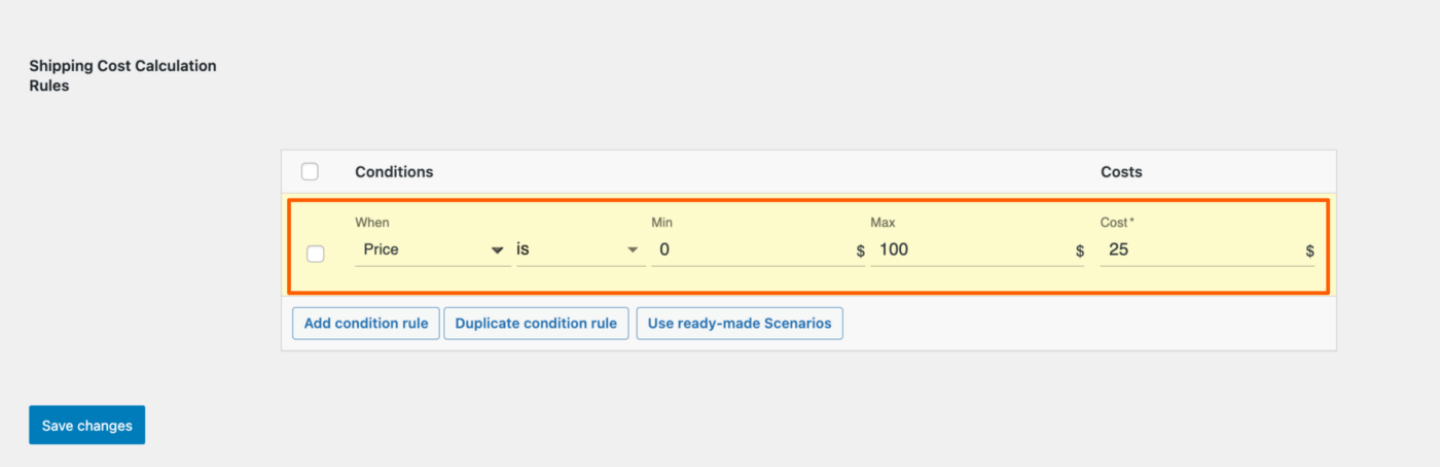

2. Scroll down and you will get this option to add shipping cost calculation rules.

3. Click on the **Add condition rule** to set the price shipping condition for your WooCommerce store.

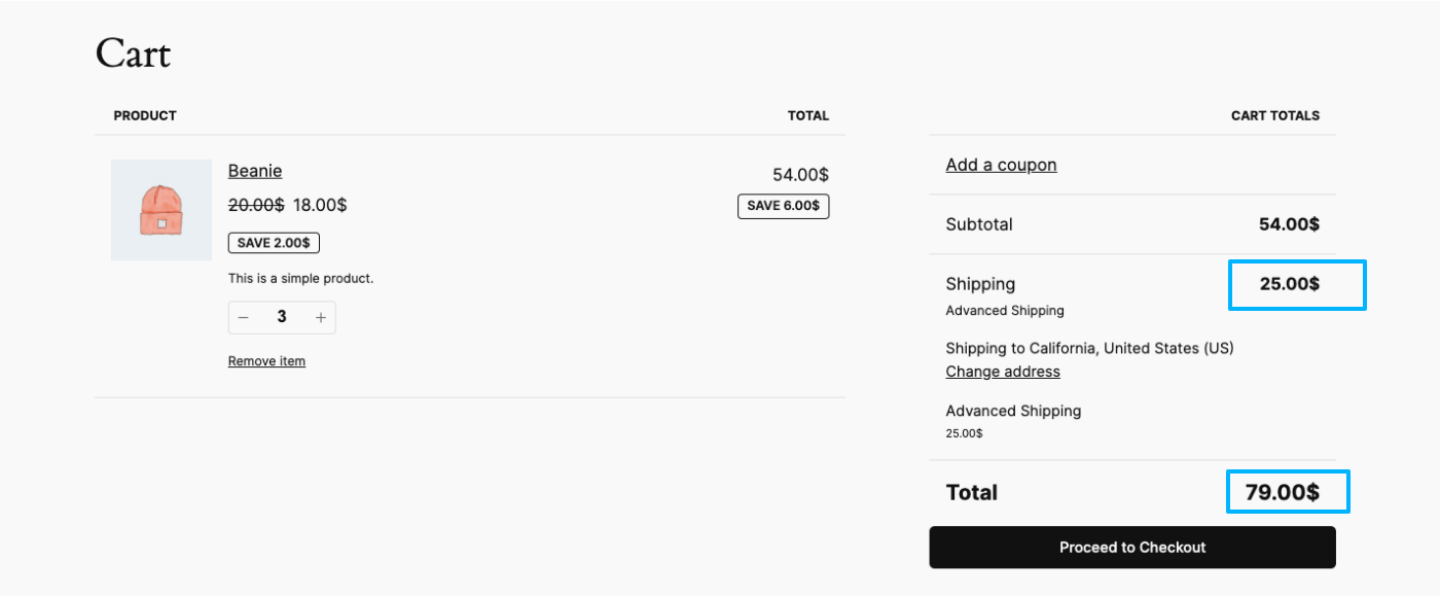

2. Now you have to select the "**Price**" condition by clicking on when field. Select "**is**" to meet the condition.

> Here, add a cart price value of $0 to $100. and shipping charge $25. That means when customers add products to their cart from $1 to $100 they will get a $25 shipping charge for the specific area you selected as zones.

Now you can see in the cart when a customer orders 3 Beanies, their total cart value will be: $18 x 3 = $54 which is between $0 to $100.

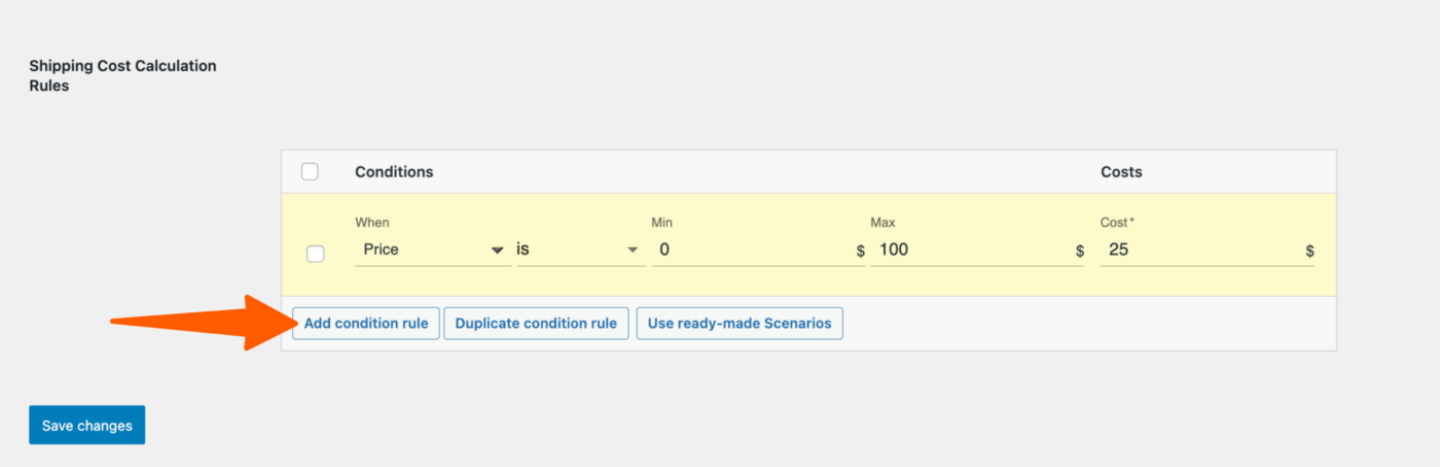

That means they have to pay $25 for the shipping charge if they want to receive the product in their specific zones.

Multiple Price Shipping Condition:

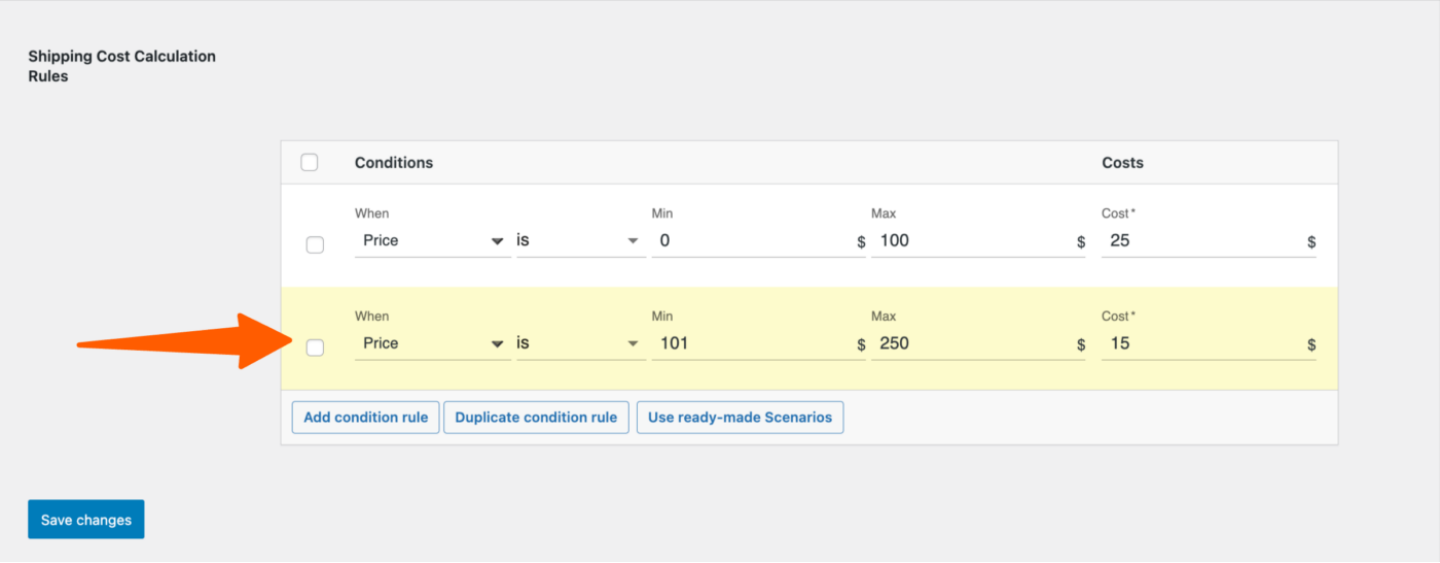

Now come to the multiple-price shipping condition where you can select different types of pricing conditions for different costs.

1. Again click on the **Add condition rule** to add a new rule.

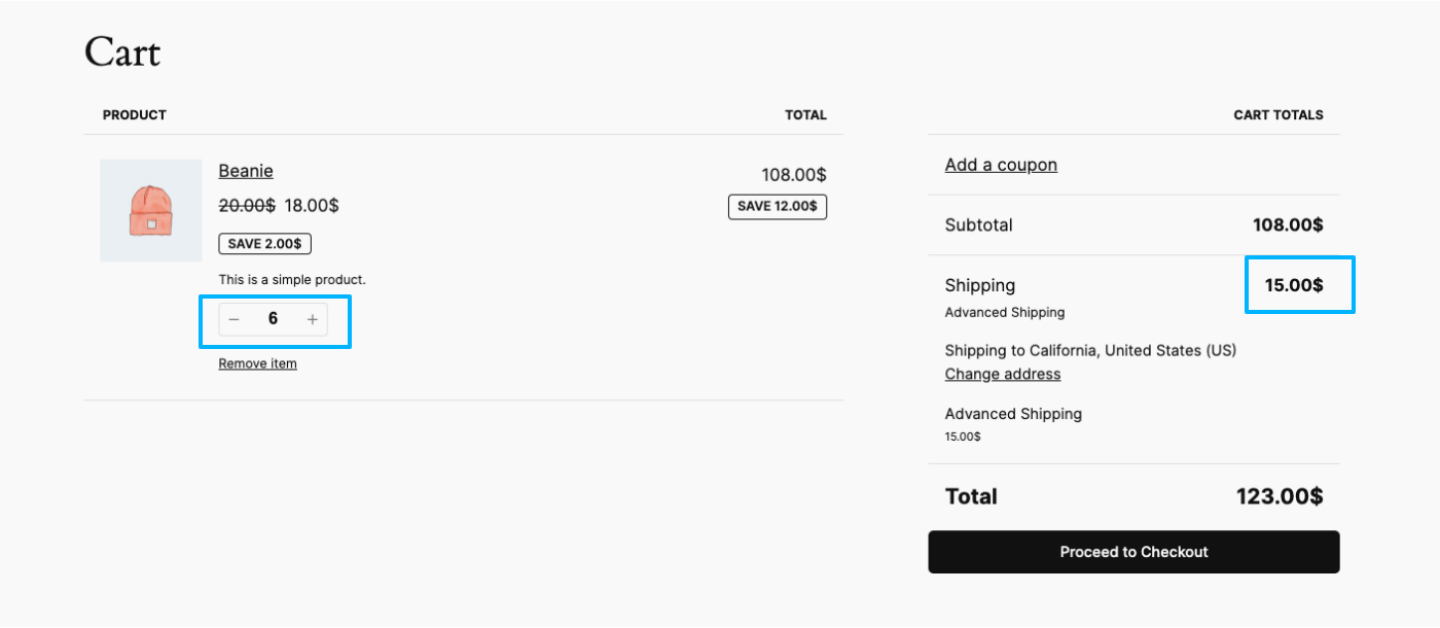

2. Here click on the the **price field** again. but this time, set conditions of **$101 to $250** and the shipping charge is **$15**.

Once you are done, click on **Save Changes** to apply it on the live site. This means if someone purchases between $101 to $250, he will get a $15 shipping charge for his cart value.

> Suppose the customer selected 6 Beanies whose cart value is $18 x 3 = $108. This cart value meets the second condition which is why it is showing a $15 Shipping charge.

So, this is how easily you can set your price-based shipping conditions for your WooCommerce Stores.
