How to Add Weight Based Shipping Conditions in Advanced Shipping

Shipping Conditions · https://rextheme.com/docs/weight-based-shipping-conditions/

In this guide, We'll show you how you can create shipping strategies based on the weight of the products that you'll deliver to your clients.

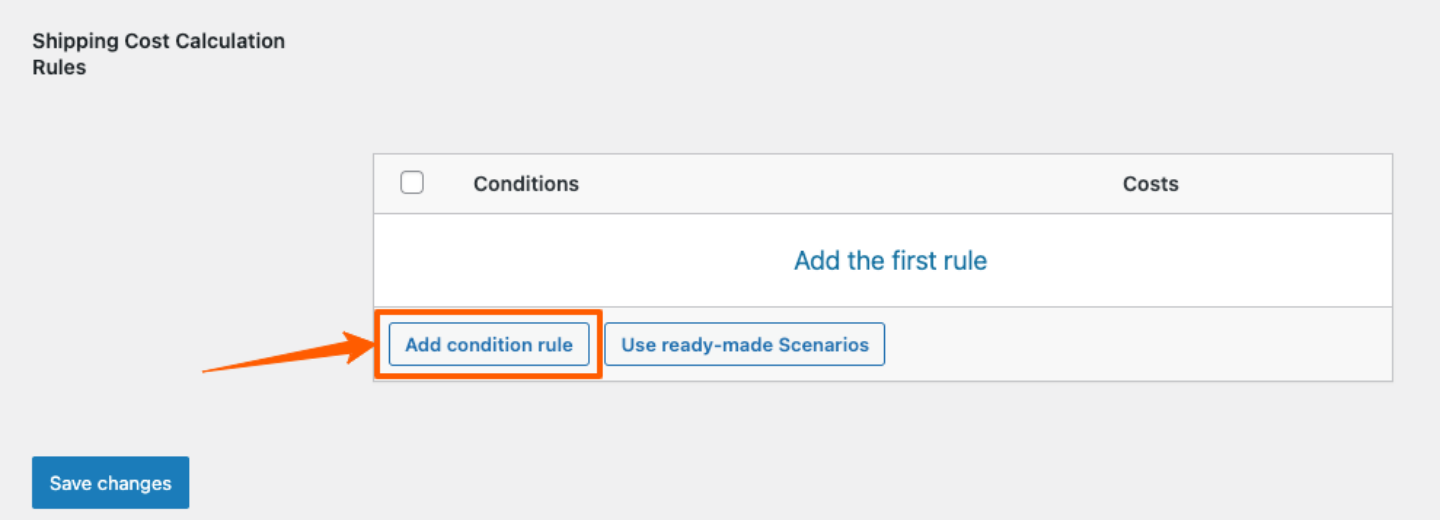

So let's have a look.

Weight Based Shipping Conditions

1. First of all, Go to **Advanced Shipping Method** Settings

2. Scroll down and you will get this option to add shipping cost calculation rules.

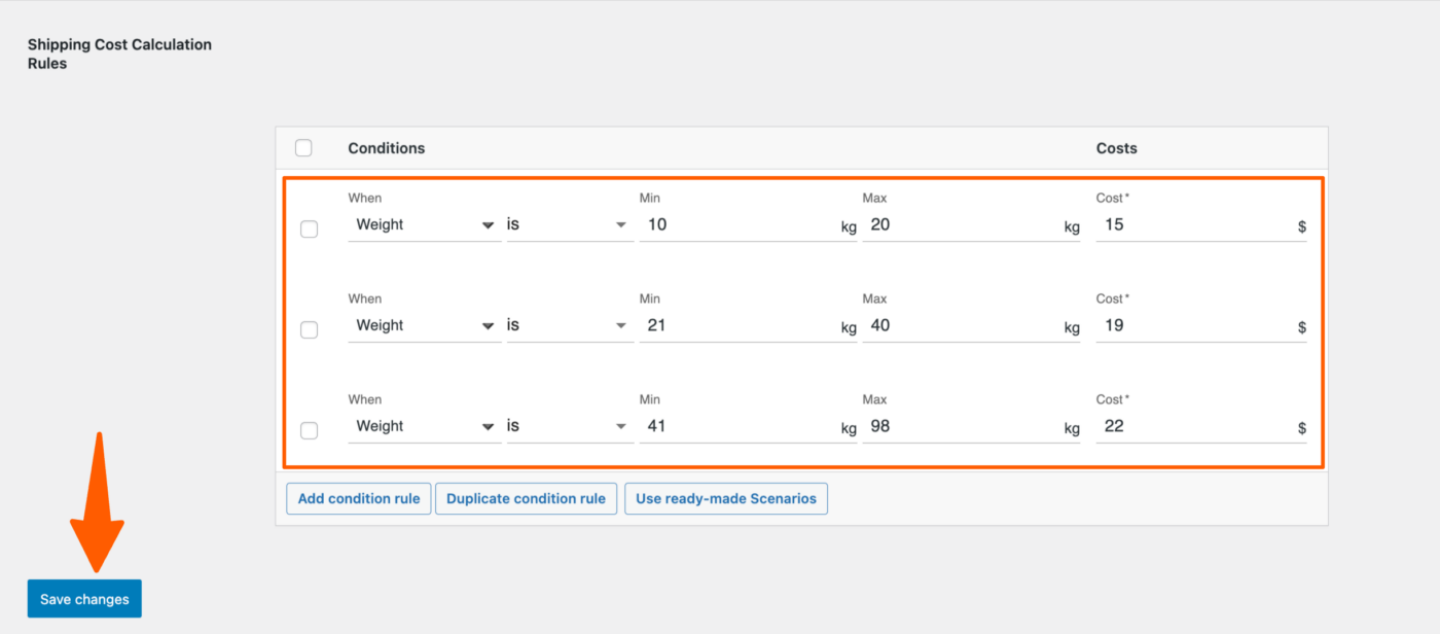

3. Click on the **add condition rule** to set the price shipping condition for your WooCommerce store.

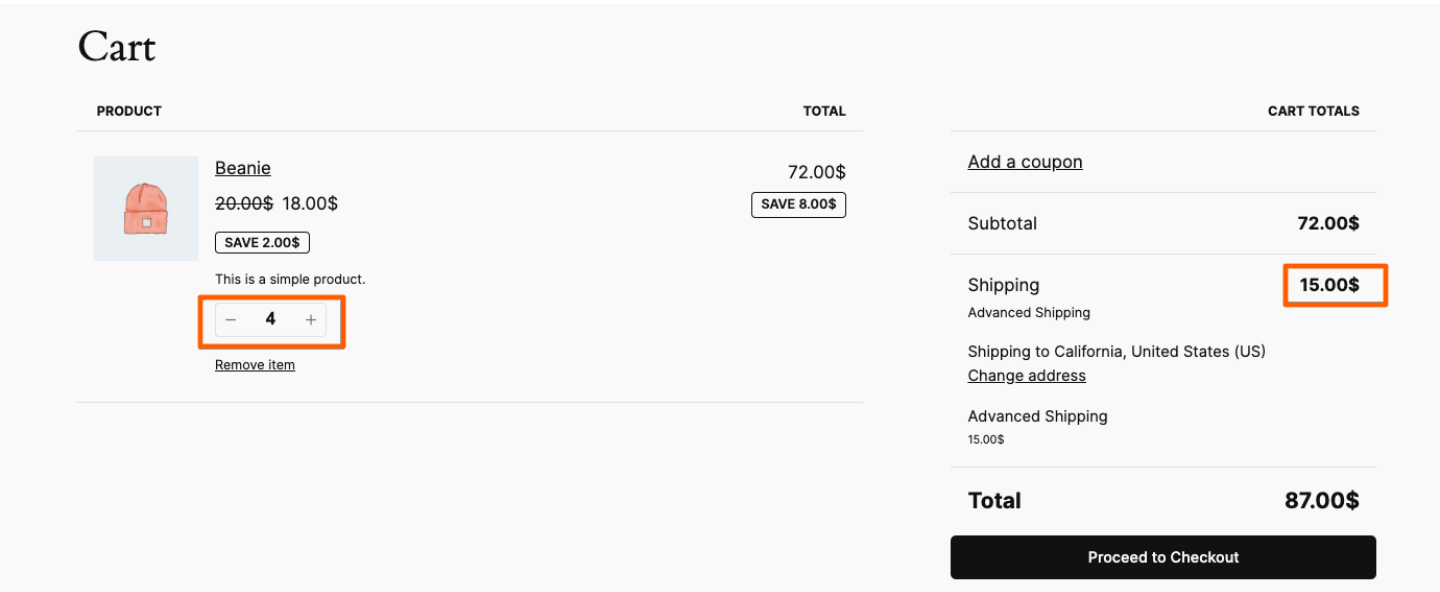

4. Suppose, you've added 3 condition rules for weight shipping conditions.

- If the product weight is 10kg to 20kg shipping charge will be $15,
- For 21kg to 40kg, the shipping charge will be $18 and
- For 41kg to 100kg, the shipping charge will be $22.

5. Click on **Save Changes** to apply the conditions.

> Example: Lets the each beanies weigh 3kgs
>
> Now when the customer selects 4 beanies, the total weight of the cart will be 12kgs.
>
> This meets the first condition and the shipping charge shows $15 according to advanced shipping conditions.

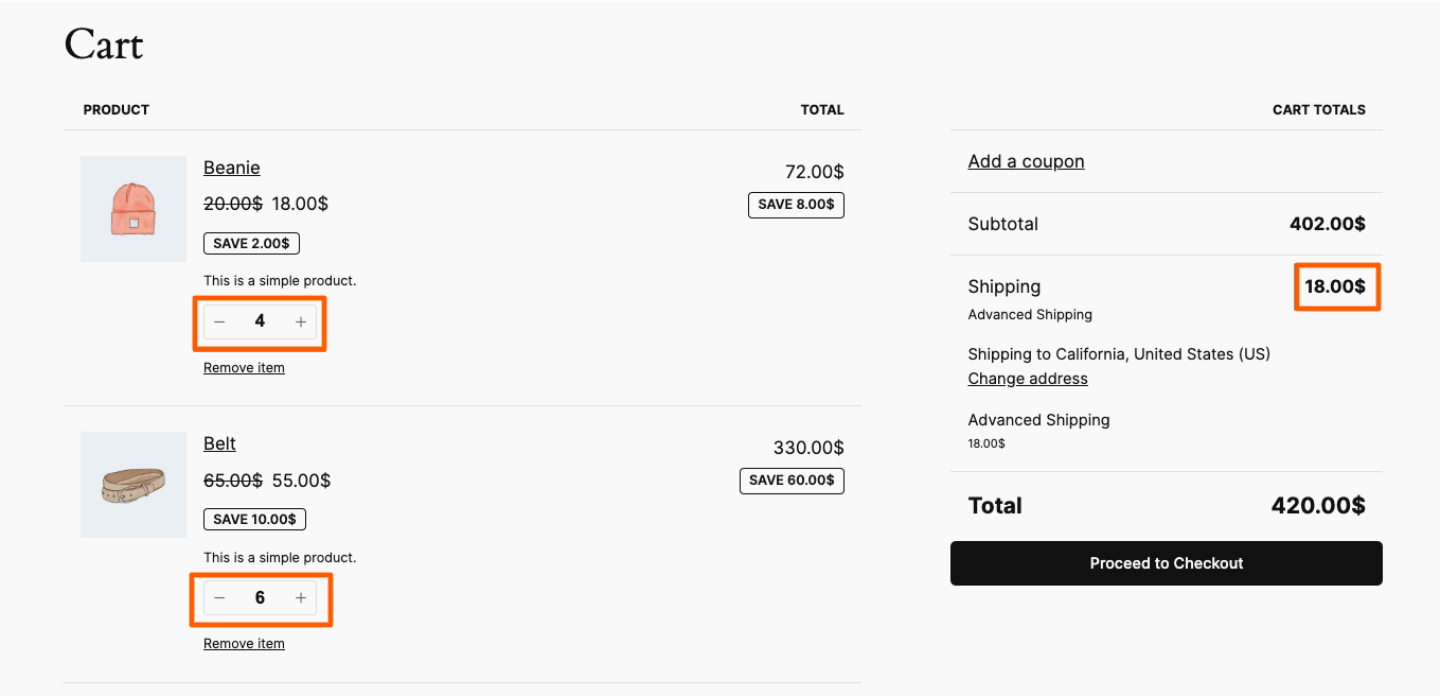

Example: Now for a different scenario,

Each Beanie weights 3 kgs and each Belt weighs 2 kgs

When your customer adds 4 beanies and 6 belts. The total weight in your cart will be (4*3 + 6*2) = 25kgs

It mets the 2nd condition of advanced shipping. That's why it is showing $18.

So, this is how you can set weight based conditions for all purchases on your WooCommerce Stores.
